Diet since entrance to metabolism.

Protein 123 gm
 Fat 51 gm
 Carbohydrate 281 gm
 Calories (approx.) 2100

Urine collections began on 11/14/45
 Fecal collections began on 11/15/45
 Nothing was sent during the 24 hour period 11/16/45 - 8 A.M.
 to 11/17/45 - 8 A.M. The experimental period began on 11/27/45 at
 11:02 A.M. This patient has been very cooperative and at present
 seems to be in fairly good health.

HPS 3:

#202444, age 56
 Diagnosis - Amyotrophic Lateral Sclerosis
 Psychosis, Depressive

Ability to eat and sphincter control are adequate at present.

Hb. 16.3 gm/100 ml. whole blood
 Urea clearance 80% of normal.

Collections of urine were begun on 11/21/45 at 8 A.M.
 Fecal collections began 11/23/45 - 8 A.M.
 Experimental period began 11/30/45 at 11:56 A.M.

As medication he has been receiving choline chloride. This has
 resulted in loose stools but these can be regulated by reducing the
 dose of choline.

So far he has cooperated quite well but has a difficult personality.
 The prognosis is poor and a fatal termination can be expected within a
 year. His diet contains:

Protein 71 gm
 Fat 134 gm
 Carbohydrate 276 gm
 Calories 2450

It begins to look now as if we might be without patients at Christ-
 mas. No one seems to want to be in the hospital on that particular day.
 I will do what I can, however, to keep the production line going.

Sincerely yours

SHB:dgh

Samuel H. Bassett
